CHAPTER I

INTRODUCTION

A. Background of Research

Jeremy Harmer (2001) believe the capacity to talk fluently calls for now no longer the best know-how of language function but the ability to method statistics and on-web website online language . Speaking is a powerful language talent Siahaan, (2008: 95).

Agreeing to Bailey (2000), speaking is an intuitive handle in which a speaker is serious about building meaning by creating, getting, and handling data. Agreeing to these countries, speaking English is exceptionally critical to hone. There are a few ways to hone talking, such as open, discussion, and talk, which the speaker, as a rule, does. This expression is what we utilize daily, but it also has its downsides. At that point, agreeing to Harmer (2001: 271274), numerous talking classroom exercises presently being thoroughly utilized are at or close to the conclusion of the communication handle. There are live talking exercises in the course, counting activities from scenarios, communicative, problem-solving, and role-playing recreations.

From the definition and explanation above, there must be several factors or difficulties with the standard intention experienced by students of EFL speaking classrooms, especially in Indonesia. Based on the other research Isyuniandri (2014) believed in students' elocution blunders in ESP 2 program. He found that one of the Indonesian students' issues in considering English is their destitute articulation. In some cases, they still articulate the words in Indonesian fashion. Students sometimes talk up since they are perplexed to create botches. In expansion, Isyuniandri (2014) found that 49.11% of graduates made a vowel mistake, 18.70% in consonants, and 32.18% in diphthongs.

Students were experienced by numerous students in Indonesia, mainly me. Since students make a mistake in vowels influences students' familiarity in talking, students get into inconvenience when the educator inquires them to hone their talking aptitudes incline toward to be the calmest they are bashful and not so

reluctant to conversation approximately inclination to precise yourself indeed before companions, in specific, individual information or supposition.

The researcher utilized a few methodologies to unravel these issues. The analyst actualized the inquiry within the classroom. As a result, instructors must get it and be able to actualize methodologies. When instructors develop strategies, understudies tend to urge bored and not pay consideration to the instructor. To familiarize understudies with the exercises instructors should do, they characterize the sort of movement.

The improvement of innovation gives students numerous assets to encourage online and offline English lessons or everyday communication. In this manner, creation can assist students in moving forward with their speaking skills. From these problems, researchers are looking for practical solutions that can be used to enhance students' speaking fluency. Previous research by Azizah (2018) in 11th grade SMAN 2 Camba Maros revealed that discussion could improve students' speaking fluency, so this study wants to re-examine whether it is still relevant and can still be applied in EFL student-speaking classrooms at the State Islamic University Bandung.

The researcher tends to discuss speaking with the students to see their speaking fluency. The highlight of the discussion is the accuracy and fluency of the student's speech. It is imperative always to practice their speaking because it influences their speaking fluency. To assist students in solving issues in speech execution, analysts must examine students' discourse issues and the causes of discourse issues. The researcher will be the reference for the preparation. Undoubtedly, analysts know how dialog strategies influence student learning results and can utilize appropriate talk strategies in English. Then the researcher wants to research discussion and how the discussion influences student was speaking fluency. The researcher's concern was " Students' experience using online discussions on their speaking fluency.

B. Research Question

The researcher built the research into the questions as takes after;

1. How does the online discussion technique in English improve the students' speaking skills?

2. How are the students experience using an online discussion to practice their speaking fluency?

C. Research Purposes

The purposes of this research were;

1. To analyze students' experiences using an online discussion to practice their speaking skills.
2. To know how discussion techniques improve the students speaking skills.

D. Significances of Research

There are research significant;

1. To Students

Students could appreciate studying to speak up using an online discussion aptitude and learning to speak English through fun exercises.

2. To English teachers

Teachers learned that numerous things might be done to create learning more energetic and agreeable.

3. To Researchers

Other researchers could anticipate the students to be among the references for research that interfaces with teachers. Methods are discussed amid the think.

E. Research Scopes

The researcher focused on online discussion techniques and their effect on students' speaking fluency. The speech was essential and how we must speak because it builds good communication and uses discussion. The researcher

focused on online discussion, a student speaking fluency, pronunciation accuracy, and vocabulary.

F. Conceptual Framework

Thornbury (2005) claims speaking could be a viable action performed by understudies to communicate their thoughts and communicate with the audience. Speaking could be a useful dialect aptitude Siahaan, (2008: 95). talking is the capacity of an individual to form a sound that exists definitively by others to develop superior communication. Moreover, talking is using dialect to communicate with others Fulcher, (2003: 23).

To communicate with people, we must speak to express meanings and verbally deliver messages and information. Speaking, students can get new information or share their ideas or feelings with others. In this study, the researcher applies an online discussion Technique to see the impact of the students speaking. In this study, the teacher gives the Questionnaire test and asks the student about their experience in using an online discussion on students speaking fluency to know the data about them.

According to Bailey (2000), the speech was an intelligent strategy wherein the speaker extraordinary to amass through the creation, getting, and handling of measurements. Speaking was the capacity to utilize dialect because it ought to be unequivocal almost someone's thoughts, points of view, or feelings interior a contraption to offer or procure measurements and data from d From those speculations, it can be concluded that the potential to converse fluidly is related to communication.

According to the grand theory above, the researcher uses the online discussion technique observation to know if it influenced their speaking practice to improve their speaking skill.

G. Research Methodology

1. Data used

Sugiyono (2009) believes that information may well be separated into the first and second data depending on the data used. The data used in this research was divided into essential and auxiliary data sources. The data could be information related to this research's subject and was obtained straightforwardly from the study. Perceptions were the important information in this research—relevant information from the questionnaire Safi'i, (2005). the first data used for this research was an observation, and the second data was a questionnaire and an interview

2. Data Collection

Case studies ordinarily include different information strategies, and information is assembled from other sources. Information collection strategies incorporate interviews, perceptions (specifically by implication), surveys, and related reports Yin, (2014). Actualizing the case consider approach requires a unique interaction between members, analysts, and gathering people. reseacher works closely with members to assemble information, select and organize thoughts for consideration in a report, create a theme, highlight a few thoughts, subordinate or avoid others, and at long last, interface thoughts and construct them into a story setting. In this handle, the reseacher offers the individual meaning of the occasion.

Triangulation may be a method to move the legitimacy and legitimacy of inquiry about discoveries. Unwavering quality alludes to the uncompromising quality and legitimacy of the think about. Legitimacy was the reseacher precisely assesses thought beneath the research. Based on students' past encounters and individual information, the reader rationally includes the data from the research to shape what students were perusing Stake (2005). In an exploratory study, triangulation by combining speculations, strategies, or eyewitnesses could offer assistance dispose of basic predispositions that emerge from using one method. Triangulation was an endeavor to research human behavior utilizing different procedures to supply perusers with a more adjusted clarification. It may be a method that permits information approval and could be utilized for quantitative research.

3. Research site and participant

This issue allowed ample opportunity to recognize the subject of the case and perform a cross-subject examination. Inside the case of considers, I incline toward choosing common topics from a cohort case think and utilizing the only extraordinary change as a strategy to speak particular issues and delineate assorted focuses of seeing on subjects. Exceptional and crack circumstances may cause considers, such as unordinary shooter events on campus Asmussen & Creswell, (1995).

The reseacher conducted this research at Sunan Gunung Djati Bandung. The members that fit in this research were the members who learned to speak. Members were EFL students. The researcher includes six students from the second semester. They are chosen based on their score in speaking fluency, separated into two students with high scores, two with average scores, and two with low scores.

4. Research Instruments and Procedure

Sugiyono (2009) believes an inquiry was an instrument utilized to a degree of visual common and social marvels. An investigation apparatus may collect, assess, and give data related to the search for intrigue. These apparatuses are most commonly utilized within the therapeutic, social sciences, and rules for evaluating patients and clients, inquiring about subjects, teachers, staff, etc. Inquire about apparatuses may incorporate interviews, perceptions, surveys, and documentation. Data were collected when members completed the discussion. Getting data from individuals with distinctive encounters maintains a strategic distance from information inclination and extends validity concerning the information.

a. Observations

The researcher observed six students from semester 2 English Education Department students at UIN Bandung. The researcher observes as the observer, instructing participants to lead the discussion. The observation was taken three

6

times and observed by observation through video. And the researcher noted the technique of online discussion among students.

b. Interview

The interview may be an assembly between researcher and student individuals through interactive questions and answers to trade data that could be deduced concerning a particular point Sugiyono (2017). Interviews were utilized as an information collected strategy when the researcher conducted preliminary inquiries and data needed Sugiyono, (2017).

EFL discussion lesson students were interviewed to choose students encountered conducted an online discussion utilizing organized discussion strategies influences familiarity. Students were asked to reply to questions postured by the reseacher and then perused exact words or sentences from standard dialects amid course talks. The reseacher chose this strategy since it was reasonable for the orderly to get comprehensive information. The interview was composed and recorded so that when the researcher returned from information collection, they considered the notes and completed the unrecorded parts.

c. Questionnaire

A questionnaire is a device that incorporates a grouping of questions or various prompts. Research questionnaires were ordinarily open-ended questions. The rationale for that's to gather actualities from students.

5. Data Analysis

The inductive analysis begins with detailed information, draws common conclusions, at that point, standard data, and after that, analyzes the collected information Muhamad, (2018). In this data analysis, the analyst collected the vital information and handled and analyzed the info utilizing triangulation. The researchers used the theory of Gay and Airasian (2000) and also used Creswell o analyze the data. The analysts utilized the approach of Cheerful and Airasian and additionally used Creswell o analyze the data.

Information obtained through interviews with considered themes lets you recognize whether the insights are indistinguishable or interesting from current insights. Triangulation could be a way of checking the legitimacy of insights by utilizing something out of entryways, the insights for checking capacities, or as an evaluation of the measurements. Based on the drift of the subjective measurements assessment method, the analyst defines the stairs in examining the insights in components.

H. Previous Study

Numerous researchers have detailed students' inspiration to memorize to talk; a few of the researchers' discoveries are acted concisely underneath:

1. Azizah (2013) discussed the inquiry about discoveries utilizing gathered dialogue progresses the talking learning preparation. They delighted in this activity and got included in the teaching-learning handle, even though this action made the lesson exceptionally loud. This action may cause the understudies to speak up. At long last, the understudies got to be more dynamic and communicative amid the talking learning preparation.

2. Hadriana (2009) discoveries of the research appeared that utilizing little bunch discourse in this research effectively made strides in students' talking skills. The enhancements secured students' 7 familiarities, elocution precision, syntactic precision, and lexicon in talking English. Little bunch talks may make a fun lesson air, so they will be specific in learning speaking.

3. Menggo's (2013) this inquiry investigated the critical distinction in talking capacity between the understudies who have moo English learning inspiration instructed by the talk strategy and those who have moo English learning inspiration prepared by the conventional approach. The research over includes a closeness and distinction with the researcher's thoughts. Based on a few analysts' results, the analyst concludes that inquiring about discoveries demonstrated the Discussion Technique's viability in affecting the students' Talking aptitudes.
